

Megger EVCA210-UK (1012-732) EV Charge Point Adapter – Mechanical Modification

27th May 2021

It has been identified that during the production of our EVCA210-UK (1012-732) EV Charge Point Adapters, a number of additional mechanical supports for the internal cabling have been omitted.

Should one particular lead become detached, it could render the PE Pre-Test ineffective and give a false reading to the operator or create a situation whereby the PE Pre-Test button becomes live, giving rise to a potential electric shock hazard to the user.

As such, Megger have taken the decision to request all units are returned to have the relevant modifications implemented, to ensure on-going customer safety. This work will be undertaken by us directly at Dover - at no cost to our end users – and will be completed as quickly as possible.

To organise for the return of your adapter, please either complete the information at the bottom of this letter and e-mail it directly to us at:

ukrepairs@megger.com

Or alternatively, contact us by telephone on **01304 502104**. Please ensure you have all the details below available.

We apologise for any inconvenience this action may cause, but our priority is safety and the safety of our customers.
